Dear all,

Plz ..... Tel me how can configure gmail for isa server clients and how many sites responsible for give access gmail .

I have created rule for gmail acces site like this

Protocal Access:- All outbond Traffic

Sites Access (url):- \*.google.com ,  
<https://gmail.com> , \*.google.\* ,<http://.google.com/account> ,<http://gmail.com/> ,<http://mail.gmail/>  
[https://\\*.google.\\*](https://*.google.*) ,<https://google.com/account>

Plz give me solution ,  
Its Urgent  
Thankx in advance

Order today Amazon.com

Jus create a domain name set in ISA with following entries

\*.gmail.com  
\*.google.com

Then create an access rule as below

Allow -> All users -> From Internal -> To <The domain Name Set>

Place this rule at top
